

Abstract

RUBBER MOUNTING, IN PARTICULAR FOR A MOTOR-DRIVEN PUMP UNIT
OF A POWER STEERING SYSTEM

5 A rubber mounting, in particular for a motor-driven pump unit of a power
steering system, the rubber mounting has a holding flange, a bolt which starts to
extend from the holding flange, a rubber element disposed on the bolt, and a
fastening eye disposed on the rubber element. The bolt is waisted so that a
particularly high flexibility of the rubber mounting in the case of movements in a
plane perpendicular to the longitudinal axis of the bolt is achieved.
